Technical data - Transfer film: polyurethane, cast/Adhesive: polyurethane-hotmelt/Thickness [mm]: 0.1 +/- 10%/Liner: PET film, self-adhesive | Transfer conditions - Temperature: 150°C/Pressure: 2 bar/Time: pre-press: 4 sec. /Remove polyester liner while lukewarm/Second pressing: 10 sec. | Wash resistance: 40°C/Wash textiles inside out | L-Flex Nylon is a thermally transferable polyurethane film with a special hot melt adhesive for labelling hydrophobic, water-repellent nylon fabrics. | By laminating a transparent, self-adhesive PET film L-Flex Nylon guarantees excellent cutting and weeding properties. | The environmentally friendly polyurethane film offers excellent resistance to washing and cleaning and is pleasant to the touch. | If the specified temperature and pressure requirements are not met during the heat transfer printing process, secure and permanent adhesion of the flex film cannot be guaranteed. | We recommend carrying out an application test on original materials. | Due to the various influences resulting from the production and transfer of the transfer film, the nature of the materials and the washing and cleaning conditions, product liability can only apply to unprocessed materials.
