

**PT906 | 4655      Poli-Flex® Printable 4655**

100% Polyurethane

Roll Length: 25m x Roll Width: 0,5m

Poli-Flex

**STANDARD**

Technical data - Transfer film: polyurethane, cast/Adhesive: polyurethane-hotmelt/Thickness [mm]: 0.075 +/- 10%/Liner: PET film, non-adhesive | Transfer conditions - Temperature: 160°C/Pressure: 2.5–3.0 bar [medium pressure]/Time: 15 sec. | Wash resistance: 60°C/Use only colour-safe and mild detergents/Wash textiles inside out/Suitable for tumble drying | Printing: On reverse, mirror-inverted | Thermally transferable, printable polyurethane film (transparent) suitable for bright textiles. | POLI-FLEX® 4655 is a two-layer transfer film coated with a hotmelt on the non-covered printable side. The upper side of the film after the application process is highly resistant to yellowing and demonstrates excellent washing resistance. | POLI-FLEX® 4655 is compatible with all current inkjet printers using ECO-solvent and solvent inks. The non-adhesive PET film allows even the most intricate motifs to be cut after printing using a CAD/CAM plotter. After weeding, heat transfer is performed with the original carrier. A matt PET-film on top of the image during the thermal transfer gives a brilliant semi-matt finish. After heat transfer, the PET film should be removed after cooling down to room temperature. | The transfer film is used for motifs and logos on sport, leisure and work wear. | Fabrics that have a water-repellent finish or waterproofing are not suitable for heat transfers. | We recommend carrying out an application test on original materials. | Due to the various influences resulting from the production and transfer of the transfer film, the nature of the materials and the washing and cleaning conditions, product liability can only apply to unprocessed materials.
