Technical data - Transfer film: polyurethane, cast/Adhesive: co-polyester hotmelt/Thickness [mm]: 0.125 +/- 10%/Liner: PET film, self-adhesive | Transfer conditions - Temperature: 130°C/Pressure: 2.5–3.0 bar [medium pressure]/Time: 5 sec. | Wash resistance: 60°C/Suitable for dry cleaning/turn textiles inside out before washing | POLI-FLEX® BLOCKOUT SOFT is a sublimation-resistant transfer film with a high opacity and a pleasantly soft feel. Sublimation effects are not seen even with higher temperature stress. | POLI-FLEX® BLOCKOUT SOFT is suitable to transfer onto textiles like cotton, mixtures of polyester/cotton and polyester/acrylic | Suitable for lettering on T-shirts, jerseys, sports and leisure wear, sports bags and fan articles such as flags and pennants. | POLI-FLEX® BLOCKOUT SOFT can be cut with all current plotters. We recommend using a standard blade (45°). | Once it has been weeded, the cut flex film is transferred using a transfer press. To avoid a sublimation migration we recommend that the garment is not pre-heated. The PET liner should be removed warm. | Nylon and textiles with hydrophobic impregnation are not suitable for heat transfer. In this case, L-Flex Nylon T500 should be used. | The soft, rubber-elastic transfer film ensures that textiles have a pleasant feel and are comfortable to wear. | POLI-FLEX® BLOCKOUT SOFT excels due to an excellent opacity. | The self-adhesive polyester film allows repositioning of the plotted motifs. | The raw materials used are not harmful to the environment and are free from PVC, plasticisers and heavy metals. | If the specified temperature and pressure requirements are not met during the heat transfer printing process, secure and permanent adhesion of the flex film cannot be guaranteed. | We recommend carrying out an application test on original materials. | Due to the various influences resulting from the production and transfer of the transfer film, the nature of the materials and the washing and cleaning conditions, product liability can only apply to unprocessed materials. | Please note that due to the barrier layer of BLOCKOUT films, there may be limitations when used on stretchable textiles. As a result, cracks, wrinkles or creases may occur in the application. This is strongly dependent on the nature of the textile as well as the size and type of the font.
