Technical data - Transfer film: Polyurethane, cast/Adhesive: polyurethane-hotmelt/Thickness mm: 0.1 +/- 10%/Liner: PET film, self-adhesive | Transfer conditions - Temperature: 160°C/Pressure: 2.5-3.5 bar (medium pressure)/Time: 15 sec. | Wash resistance: 80°C/Suitable for tumble drying and dry cleaning; Perchloroethylene (Tetrachloroethylene)/Wash textiles inside out | L-FLEX is an ecologically safe polyurethane film with a matt, non-reflective surface. | L-FLEX is suitable to transfer onto textiles like cotton, mixtures of polyester/cotton and polyester/acrylic. | Suitable for lettering on T-shirts, jerseys, sports and leisure wear, sports bags and fan articles such as e.g. flags. | Recommended Knife: Standard, 45° | The liner should be removed when warm. Exceptions to this are the Neon colours and Light Blue, which should be removed when cold. | This film should not be used on dark textiles with a high polyester content as this can lead to discolouration (bleed-through) of the textile. In such cases, we recommend the use of Poli-Flex® Blockout Soft PT601N. | Nylon and textiles with hydrophobic impregnation are not suitable for heat transfer. In this case, L-Flex Nylon T500 should be used. | The soft, rubber-elastic transfer film ensures that textiles have a pleasant feel and are comfortable to wear. L-Flex has excellent opacity. The self-adhesive PET liner allows repositioning of the plotted motifs. | The raw materials used are not harmful to the environment and are free from PVC, plasticisers and heavy metals. | If the specified temperature and pressure requirements are not met during the heat transfer printing process, secure and permanent adhesion of the flex film cannot be guaranteed. With the exception of the colours metallic and neon, the L-Flex series can be pressed in multiple layers. | We recommend carrying out an application test on original materials. | Due to the various influences resulting from the production and transfer of the transfer film, the nature of the materials and the washing and cleaning conditions, product liability can only apply to unprocessed materials.
