**Poli-Flex® Printable 4675**

100% Polyester

Roll Length: 25m x Roll Width: 0,5m

Poli-Flex

STANDARD

Technical data- Transfer film: Polyester weave/Adhesive: Polyurethane-hotmelt/Thickness [mm]: 0.20 +/- 10%/Liner: silicone paper | Transfer conditions - Temperature: 160°C/Pressure: 3.0 bar [medium pressure]/Time: 15 sec. | Application: Print transfer paper with sublimation ink (mirror-inverted)/Place the sublimation paper on top of the polyester fabric and transfer the motif using a heating press set at 190°C, applying medium pressure (3.0 bar) for 40–50 seconds. /Press the printed polyester fabric onto the textile, following the specified transfer guidelines. | Wash resistance: 90°C/Use only colour-safe and mild detergents/Wash textiles inside out/Suitable for tumble drying | Printing: indirectly using transfer paper | Heat-seal polyester fabric (white) specially developed for sublimation printing. The silicone paper liner allows even the most intricate motifs to be cut after printing using a CAD/CAM plotter. The polyester fabric is easy to weed. | For transfer and as a protective cover during hot transfer, we recommend the use of POLI-TACK 850 (PT300). | Suitable for printing motifs and logos on sport, leisure and work wear. | The uniform surface ensures bold, brilliant colours are retained during printing. | Fabrics that have a water-repellent finish or waterproofing are not suitable for heat transfers. | We recommend carrying out an application test on original materials. | Due to the various influences resulting from the production and transfer of the transfer film, the nature of the materials and the washing and cleaning conditions, product liability can only apply to unprocessed materials.
